

FLOMAX

HARP SCREENS

FloMax™ - Poly

Advanced Engineering Group's piano/harp screen with polyurethane stringers.
We can manufacture the poly stringers to suit any machine set-up.
We can supply almost any specification from our standard piano wire screen list,
within the following limits:-

* Polyurethane Hardness - 85-90 Shore

1. Apertures between 1.5mm - 46.0mm
2. Wire thickness between 1.2mm - 8.0mm
3. Max length - 1800mm (along the hook)
4. Max width - Unlimited O/H (over hooks)

The benefits of using polyurethane over plastic or steel spacers is it can withstand more impact and the wear life around the stringer/spacer area is 2-3 times greater.

*High Tensile & Stainless Steel Wire Available

All FloMax screens are factory tested and are designed to maintain a "True" aperture. We are also able to vary the hooks to suit all tension bar setups.
