

VIBREXTM

SELF CLEANING SCREENS AEG

Advanced Engineering Group supply VIBREX **S-Style** self-cleaning screen cloths in polyurethane

VIBREX S-Style screens compose of individual wires that vibrate independently at different frequencies preventing material accumulating between the wires and allowing the self cleaning effect.

S-Style screens are best used when a precise product is not required or screening round or square material. Similar to a Harp (Piano) screen, the S-Style has maximum open area eliminating blinding and reducing fines.
